

Pearson VUE: A trusted partner in validating skills and experience

Pearson VUE partnered with the Department of Defense more than a decade ago to build a network of on-base testing centers that deliver high-stakes, professional certification exams to the US military community.

In the years that followed, our work with the federal government has expanded to include the Defense Security Service, Department of State, United States Defense Intelligence and other government agencies.

With the most experienced staff of PhD psychometricians, Pearson VUE provides a suite of exam development and certification program services. In addition, we support commercial-off-the-shelf (COTS) and customized program solutions.

Pearson VUE has undergone rigorous security scrutiny and validation to comply with the Federal Information Security Management Act (FISMA). We continue to comply with FISMA requirements and to receive the government's Authority to Operate in order to work with federal customers.

Training materials,
certification vouchers
& asset management systems for the
US military

Credentiaing plays a key role in government initiatives. From certifying cybersecurity capabilities at military training facilities to validating the extensive training and experience that Service members receive for a broad range of military duties, Pearson VUE is the U.S. government's leading provider of certification and licensure testing.

Full-service learning and certification testing—with streamlined procurement and asset management tools.

Developed specifically for those responsible for training US Service members, federal government employees and contractors, Pearson VUE brings together learning products, exam vouchers and robust digital inventory tracking and budget management tools in a single, comprehensive offering.

Unsurpassed multi-modal learning products. Because individuals learn in different ways, Pearson VUE works with the world's most respected publishers to bring you a diverse collection of technology learning materials:

- Instructor-led training resources
- Self study
- Online courseware
- Virtual labs
- eBooks
- Practice tests
- Flash cards and a host of other products

Certification exam vouchers from leading cybersecurity and productivity programs like Microsoft, CompTIA, LPI, Adobe, Cisco and VMware are available from Pearson VUE. Whether students' focus is cybersecurity, networking, cloud computing or development, these high-stakes exams validate the skills and knowledge required to perform at the highest levels.

Inventory and budget information in real-time provides more agile and effective forecasting and resource allocation. Assign, deliver and track usage of all your digital learning assets including certification vouchers and practice exams. Based on expiration dates or candidate preparedness, the solution allows administrators to redistribute unused assets to other students.

Pre-conditioned, rule-based distribution lets you approve, assign and execute a learning pathway for Service members pursuing certification. When a student achieves a preassigned score on a practice test and shows readiness to sit for an exam, the system can automatically send a voucher with instructions on how to schedule the exam.

Flexible financial management allows you to purchase learning products and exam vouchers on your schedule and as requirements change, with the added ability to reallocate funds across product lines if necessary.
