

## If cybersecurity is your responsibility, CyberSec First Responder (CFR) is your certification.

Cybersecurity professionals require a well-rounded understanding of the tools, processes, and strategies that can be employed to defend their information systems from constant evolving threats.

The cybersecurity specialists assigned to protect government information systems want the most up-to-date certifications to validate critical skills:

CFR is approved by the U.S. Department of Defense (DoD) to fulfill Directive 8570 requirements

CyberSec First Responder takes a holistic approach to ensuring service members, government employees and contractors confidently prevent, identify and respond to malicious activities involving data systems.

- Threat and attacks
- Data collection and analysis
- Incident response methods, tools, and techniques
- The incident response process
- Vulnerability Assessment

### And it gets better...

- The CFR exam voucher includes one free retake (if needed)
- Passing the CFR exam earns free membership to the Information Systems Security Association (ISSA)

CyberSec First Responder from CertNexus certifies the skills needed to protect information systems before, during and after an attack.

“You are the first line of defense your unit has against a cybersecurity attack. Don't leave it to chance. Become CFR certified.”
